EXCEPTIONAL GOLD INTERSECTIONS FROM DRILLING AT BARLEE

Market Capitalisation

\$8.1 million

Beacon Minerals Ltd (ASX Code: BCN) is pleased to announce further drilling results from Reverse Circulation (RC) holes at Halleys East at the Barlee Gold Project (E77/1297, BCN: 80%).

Results include:

Cash at Bank

\$1.0 million

- **27m @ 36.4 g/t**
(inc. 3m @ 114.8 g/t, 2m @ 121.8g/t and 2m @ 85.2 g/t)
- **3m @ 6.3 g/t (inc. 1m @ 17.4 g/t)**
- **2m @ 10.8 g/t EOH**
- **9m @ 3.7g/t (inc. 3m @ 9.5 g/t)**
- **7m @ 1.1 g/t**
- **1m @ 8.9 g/t**
- **2m @ 3.0 g/t**

Stock Exchange

ASX: BCN
BCNO

MD Darryl Harris said, "These extensive high grade intercepts from Halleys East have further defined the shallow, oxide gold zone at this prospect. Open extensions still exist both at surface and depth with the results from the deeper holes at Halleys East and drilling results from Buddy and Phil eagerly awaited".

The results are from another 5 holes of the 43 hole, 4,000m RC program that was completed in Mid-August. Results for 10 holes have now been received, with the results from the initial five holes (ASX release 14/08/08) also returning encouraging results from Halleys East, including;

The program targeted priority areas where significant shallow gold intercepts had been previously received. The drilling is aimed at further defining and extending the known gold mineralisation both along strike and at depth, and it is anticipated that the company's first JORC compliant resource will be calculated following the completion of drilling and the interpretation of assay results.

The Barlee Gold Project is 200 kilometres (kms) north of Southern Cross, in the goldfields region of Western Australia, and covers an area of over 400km² in three tenements (E77/1297; BCN 80%, E77/1364 & E77/1392; BCN 100%). Only a small portion of this prospective greenstone belt has been systematically explored for gold, and very few holes have been completed to depths of +100m (approximately 3.4%).

					53	54	1m @ 2.9
					62	63	1m @ 1.0

Results calculated at + 0.5 g/t Au, with a maximum of 2 meters internal dilution.

Repeat assays averaged.

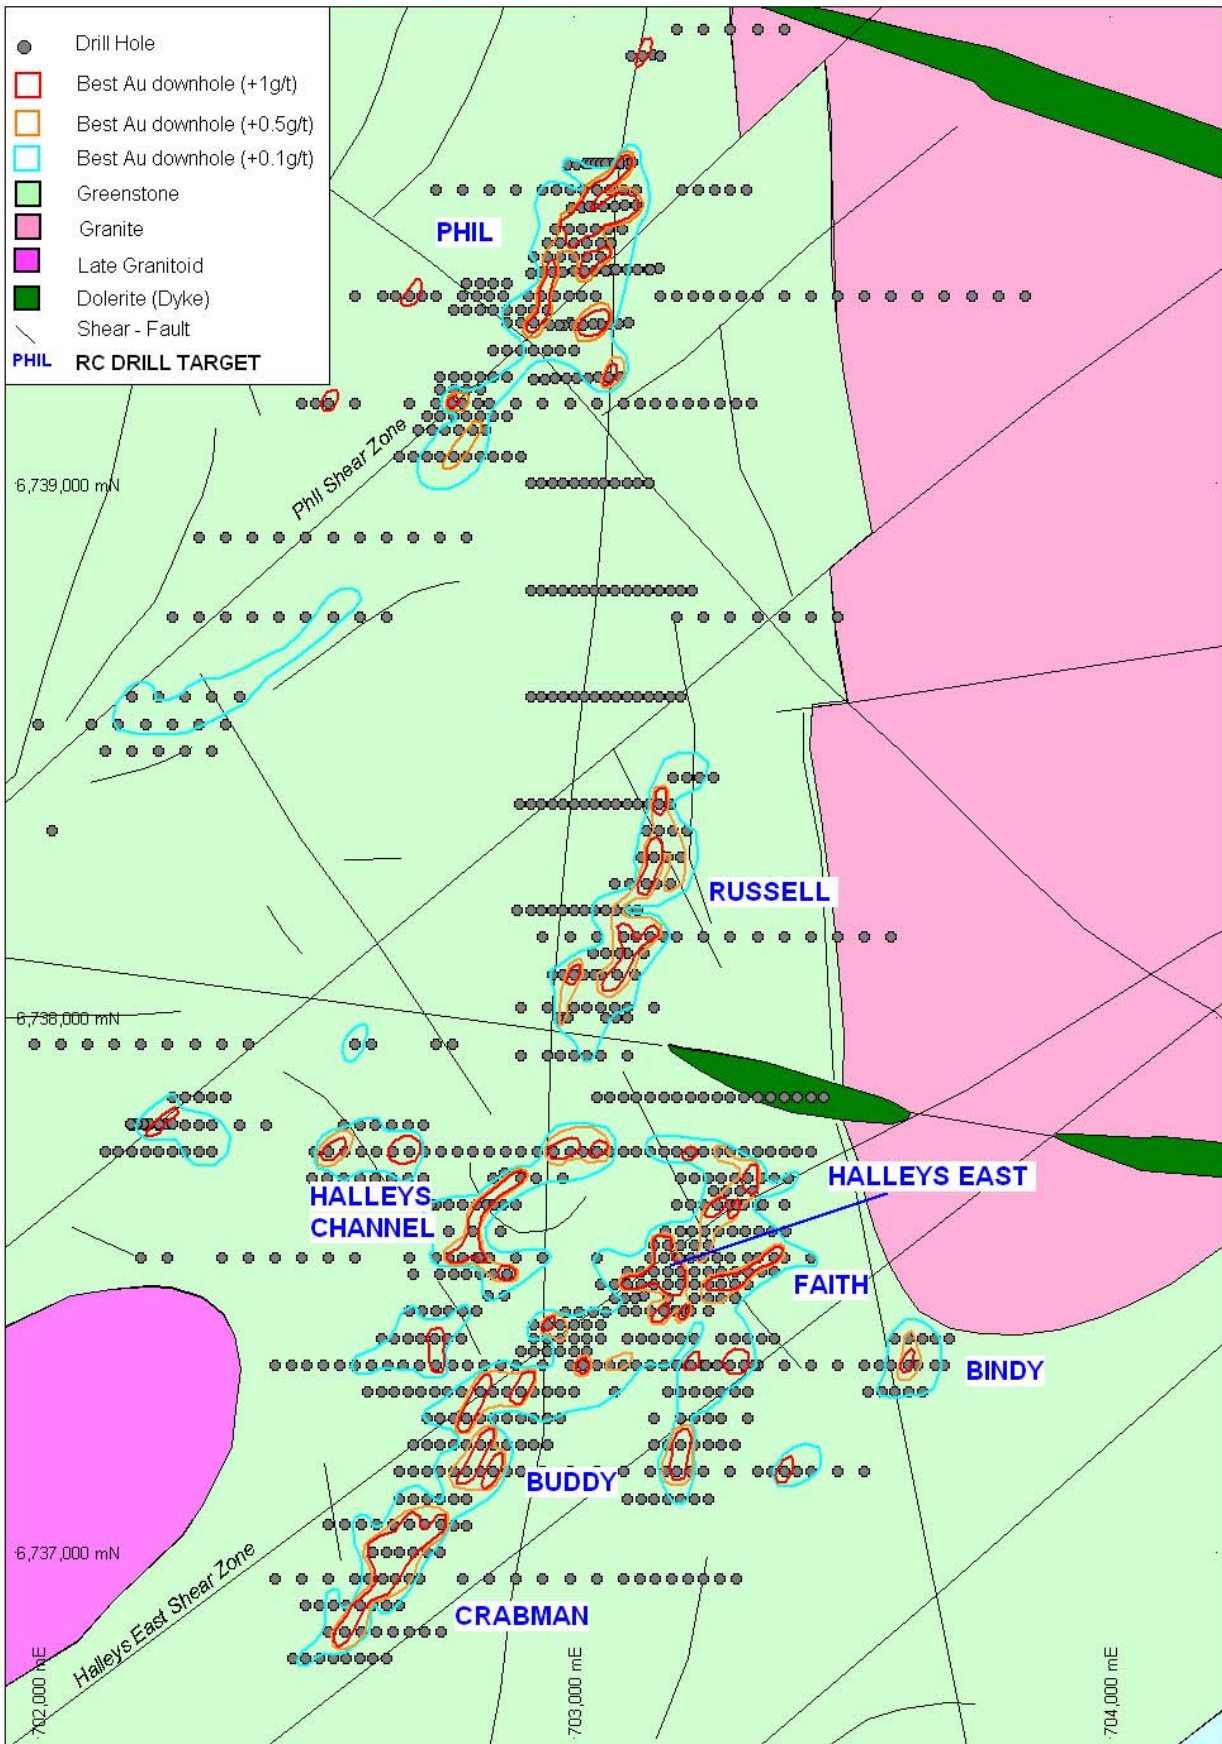

All holes drilled at -60° to 320°.

Samples collected as single meter samples from 75:25 splitter via cyclone mounted on drill rig.

Duplicate and blank samples inserted routinely.

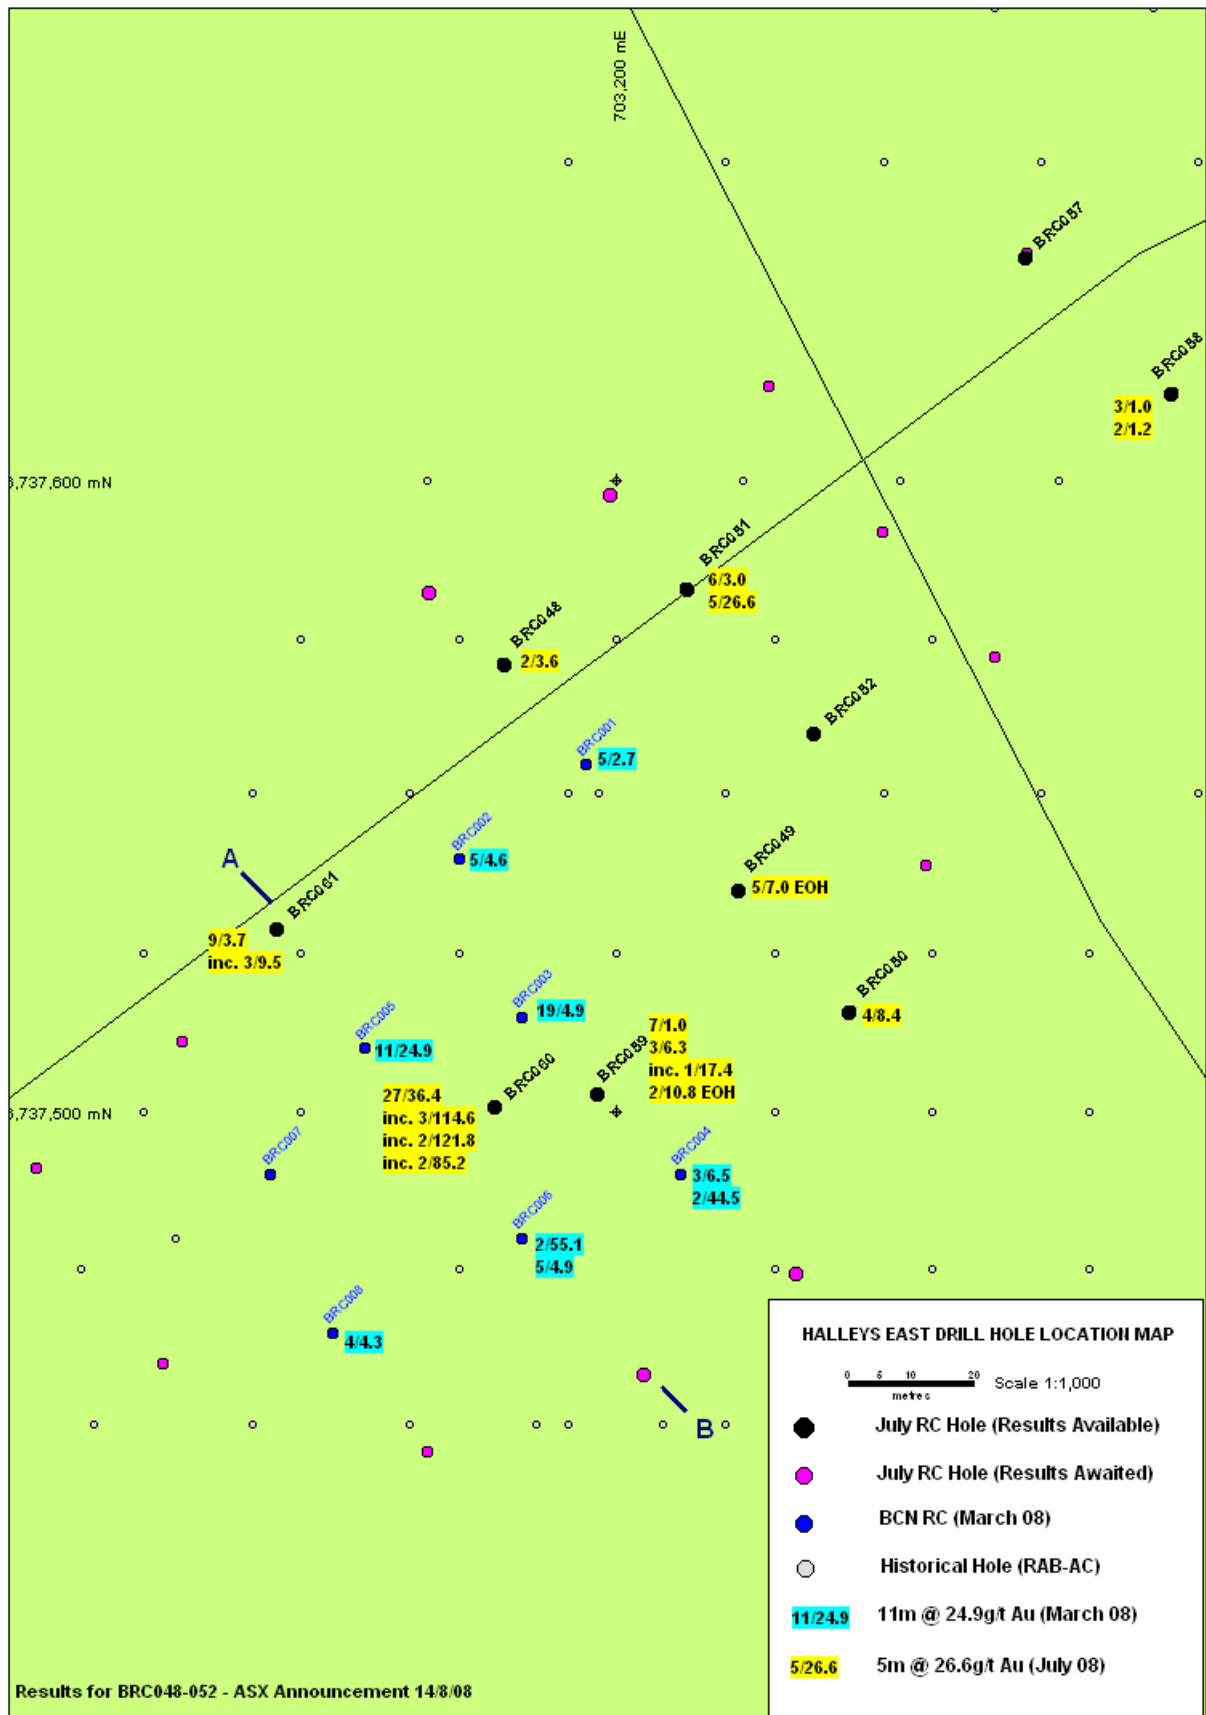

Assays sent to Ultratrace Laboratories in Perth. Gold & PGE determination via Fire Assay-ICP/OES

Au = gold, EOH= End of Hole, NSR = No significant result
